16 January 2009 - ApacheTomcat Native 1.1.16 Released

[PR] - [Pensez et devenez riche](#)

The [Apache Tomcat team](#) is proud to announce the immediate availability of [Tomcat Native 1.1.16](#) stable. This build contains a small number of bug fixes over the previous release.

Please refer to the changelog:

<http://tomcat.apache.org/native-doc/miscellaneous/changelog.html>

for a complete list of changes.

Downloads: <http://tomcat.apache.org/download-native.cgi>

Note: This announcement note has been sent later then actual release was made because of delayed voting.

[-- The Apache Tomcat Team](#)

Note:

04 November 2008 - Apache Tomcat JK 1.2.27 Web Server Connector released

[PR] - [Pensez et devenez riche](#)

The [Apache Tomcat team](#) is pleased to announce the immediate availability of version 1.2.27 of the [Apache Tomcat Connectors](#).

It contains connectors, which allow a web server such as [Apache HTTPD](#), Microsoft IIS and Sun Web Server to act as a front end to the Tomcat web application server.

This version contains several enhancements, like e.g.

- Watchdog Thread
- Improved Connection Probing
- Mount Extensions
- Better IIS Support
- Enhanced Status Worker

and also fixes a number of minor bugs.

See

<http://tomcat.apache.org/connectors-doc/news/20081001.html#28%20October%20-%20JK-1.2.27>

for a more detailed description and

<http://tomcat.apache.org/connectors-doc/miscellaneous/changelog.html>

for a complete list of changes.

Source distributions can be downloaded from an Apache Software Foundation mirror at:

<http://tomcat.apache.org/download-connectors.cgi>

Binary distributions for a number of different operating systems and web servers can be downloaded from an Apache Software Foundation mirror at:

<http://tomcat.apache.org/download-connectors.cgi>

Syncing the release to the download mirrors might take up to 48 hours.

Documentation for using Apache Tomcat Connectors can be found at:

<http://tomcat.apache.org/connectors-doc/>

Thank you,

-- The Apache Tomcat Team

18 May 2007 - Apache Tomcat JK 1.2.23 Web Server Connector released

[The Apache Tomcat team](#) is pleased to announce the immediate availability of version 1.2.23 of the Apache Tomcat Connectors.

It contains connectors, which allow a web server such as [Apache HTTPD](#), Microsoft IIS and Sun Web Server to act as a front end to the Tomcat web application server.

This version contains only one security fix:

CVE-2007-1860: Information disclosure (patch for CVE-2007-0450 was insufficient)

With the mod_jk default configuration, double encoded URLs could break JkMount access control. A complete fix might need configuration adjustments. Please consult

<http://tomcat.apache.org/security-jk.html>

for a more detailed description. Please note, that this issue only affected the Apache HTTPD module mod_jk.

Source distributions can be downloaded from an Apache Software Foundation mirror at:

<http://tomcat.apache.org/download-connectors.cgi>

Binary distributions for a number of different operating systems and web servers can be downloaded from an Apache Software Foundation mirror at:

<http://tomcat.apache.org/download-connectors.cgi>

Documentation for using JK with Tomcat 3.3, 4.1, 5.0 and 5.5 can be found at:

<http://tomcat.apache.org/connectors-doc/>

07 December 2005 - Apache Tomcat v5.5.14-beta Now Available

[The Apache Tomcat team](#) is proud to announce the immediate availability of Tomcat 5.5.14-beta. This main change in this version is an update of the [APR](#) optional dependency to version 1.1.1, and related configuration changes for the APR connector and installer. There are a few additional bugs fixed, as detailed in the [change log](#).

Because of the quickness and contents of this release, 5.5.13-beta will stay a beta release: it will not receive a stability vote. Instead, we will vote as usual on 5.5.14 stability approximately a week from today.

08 November 2005 - Apache Tomcat mod_jk 1.2.15 Web Server Connector

released

[The Apache Tomcat team](#) is pleased to announce the release of version 1.2.15 of the Apache Tomcat mod_jk web server connector.

Tomcat is the reference implementation of a web application server which implements the Java Servlet and JavaServer Pages specifications.

mod_jk is a connector which allows a web server such as [Apache HTTPD](#) to act as a front end to the Tomcat web application server. This version fixes a number of minor bugs.

See <http://tomcat.apache.org/connectors-doc/changelog.html> for a complete list of changes.

Source distributions can be downloaded from an Apache Software Foundation mirror at: (they are named jakarta-tomcat-connectors-1.2.15-src.tar.gz and jakarta-tomcat-connectors-1.2.15-src.zip)

<http://tomcat.apache.org/download-connectors.cgi>

Binary distributions for a number of different operating systems and web servers can be downloaded from an Apache Software Foundation mirror at:

<http://tomcat.apache.org/download-connectors.cgi>

Documentation for using mod_jk with Tomcat 3.3, 4.1, 5.0 and 5.5 can be found at:

Note:

Apache Tomcat -- Posted by [Tetsuya Kitahata](#) at 2005-10-09T16:55:30

23 September 2005 - Apache Tomcat 5.5.12-alpha Now Available

[The Apache Tomcat team](#) is proud to announce the immediate availability of Tomcat 5.5.12-alpha. This version contains several bug fixes, including an import change to session attribute storage concurrency that is required by the upcoming Servlet Specification v2.5. In addition to these changes, this release is a significant milestone for two reasons:

This release is the last one to be done using the CVS repository at Apache. The Tomcat team is moving to the Subversion (SVN) repository as part of the overall Apache initiative to do so. Access instructions for the SVN repository are available at <http://www.apache.org/dev/version-control.html>. The move is expected to be

complete within the next week.

As part of Tomcat's move to a top-level project (TLP) at [Apache](#), we will be migrating our content to <http://tomcat.apache.org>, which is still under construction at this time. That site will have its own download pages and related information. We will keep the key jakarta URLs intact with redirection, but please keep an eye out and update your bookmarks to <http://tomcat.apache.org> as/when appropriate. As part of the TLP move, distribution names have changed from jakarta-tomcat-* to apache-tomcat-*, and similar minor branding changes will gradually become visible in the web site and documentation. We thank the [Jakarta project](#) for its support over the years, and we will continue collaborating on projects and issues of common interest.

24 July 2005 - Apache Jakarta Tomcat v5.5.10-alpha Now Available

[The Apache Jakarta Tomcat team](#) is proud to announce the immediate availability of Tomcat 5.5.10-alpha. This build contains 110 improvements, including bug fixes, enhancements, and documentation updates. There are several interesting new features, such as [Apache Portable Runtime](#) (APR)-based HTTP/1.1 and AJP/1.3 protocol handlers with SSL support, an experimental NIO-Socket channel for the AJP/1.3 connector, improved support for Java 5 using the Eclipse 3.1 JDT, clustering support at the Engine and Host levels, and more.
